Description:

The **Nical** cartridge water **softeners** have been designed to be connected to coffee machines using a suction hose.

All parts of **Nical** are made of plastic, conforming to the existing EU Ministerial Decrees and binding in relation to the identified use destination.

It consists of a single column containing resins mixed together to retain the cations present in the water.

These cartridges are ineffective after so many litres have pass through them.

They cannot be recharged.

They should be disposed off after 25-300 litres have passed through the filters.

Before you to use

This water softener needs to be rinsed before use.

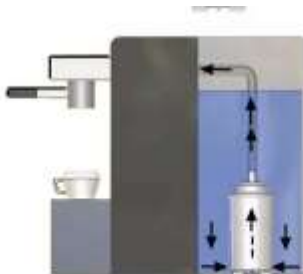

Questo addolcitore deve essere risciacquato prima dell'uso.

Este suavizador de agua debe enjuagarse antes de su uso.

Dieser Wasserenthärter muss vor dem Gebrauch gespült werden

- 1) Rinse the new cartridge with clean water under the tap.
- 2) Soak new cartridge in a 1L container for **10 min**
- 3) Insert the suction tube onto the cartridge.
- 4) Fill water tank with clean water and put new cartridge into water tank.
- 5) Make sure that silicon tube is not kinked.
- 6) Run 1-2 cups through the machine to fully remove any after taste.
