

Cleaning your coffee machine

Your coffee machine needs to be cleaned on a regular basis to avoid bitter coffee and maintenance problems.

What is backflushing ?
This is the process of cleaning the coffee group and its internal parts from coffee oils.

Can all machines be backflushed? ?
Your machine will need a electro valve solenoid. If you don't have a solenoid shower screens can be cleaned by removing and cleaning in a pulycaff solution

How often should I backflush?
Commercial machines : Daily
Home machines : At least once a week

Steel blind filter

Pulycaff cleaning powder

Grouphead cleaning brush

Backflush materials

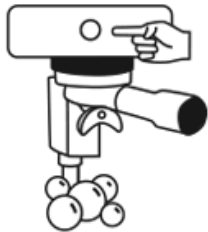

Back-flushing

Insert 1 scoop of powder into blind filter

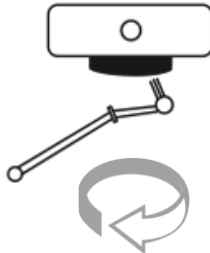

1 SCOOP

Run coffee button for 10 sec Repeat 5 times

Brush inside removing powder from gasket and shower

Rinse water from group onto blind filter.

Back flush with no powder for 10 sec. Repeat x 5.

Make 1 coffee and discard.

Portafilters, baskets and shower screens

Cleaning portafilters and baskets.

Once a week immerse the shower screen, filter basket and portafilter in a cleaning powder solution.

Use hot water + 1-2 tea spoons of powder.
Leave for 10-20 min
Rinse in cold water
